User Stories

Description

This backlog outlines the user stories for the AI recommendation filter, which applies allostatic regulation to dynamically filter and restrict YouTube recommendations. It uses an LLM-based classifier to categorize content, provides an interactive control panel for regulation settings, visualizes regulation levels over time, and includes analytics to help users manage their viewing habits. The stories cover core features, UI, analytics, integration, quality assurance, and optional enhancements.

User Stories - Due in Sprint 2

1. As a user, I want to toggle the content categories filtered out so that I can regulate topics that matter to me.
2. As a user, I want a small icon on the toolbar to show that filtering is active.
3. As a user, I want to be able to easily turn the filter on and off from my toolbar.
4. As a user, I want a simple dashboard to see and change my category settings so that I don't have to dig through complex menus.
5. As a user, I want to see how effective the filter has been for me through analytics shown on the dashboard (e.g., number of videos blocked this week).
6. As a user, I want a time-series graph showing regulation level per category over time so that I can understand how/when the system tightened or relaxed.
7. As a user, I want gentle interventions on recommendations (blur/cover regulated content) so that I can control my YouTube content without breaking the site.
8. As a user, I want to save my blocked categories in local storage so that my settings are consistent across different sessions.
9. As a user, I want the extension not to break YouTube layouts so that the site stays usable.
10. As a user, I want minimal permissions and local-first storage so that my data stays private.

User Stories - Due Upon Project Completion

1. As a user, I want the extension to classify each YouTube video by type (political/violent/sexual/educational/etc) so that I can control what I see.
2. As a user, I want to add new content categories so that I can regulate niche topics that matter to me.
3. As a user, I want to set a regulation level per category (via slider/dial) so that I can fine-tune how strict the filter is.
4. As a user, I want an allostatic mode that increases or decreases regulation based on my recent exposure so that the filter adapts to my habits.
5. As a user, I want my regulated content to be removed from my YouTube entirely so that I can have full control over my YouTube page.
6. As a user, I want to easily override the regulator to implement a short break time so that I can intentionally watch something when I really want to.
7. As a user, I want analytics of watch time per category and trends so that I can spot my binge-watching patterns.
8. As a user, I want the extension to be fast and optimised so my browsing experience is not negatively affected.
9. As a user, I want my search results to be filtered so that blocked videos don't show when I search (in addition to the recommended video filtering).
10. As a user, I want the dashboard/ control panel to be visually appealing to me.

User Stories - Additional/ Optional Features (Out of Scope for MVP)

1. As a user, I want onboarding tooltips (introduction tutorial) that explain controls in plain language so that I can use the extension without knowing the complicated details.
2. As a user, I want to be able to toggle my dashboard theme between night mode and dark mode.
